

Combining DC regulated power supply and electronic load device, charge / discharge test is easily started with LinkVIeW.

GW Instek introduces LinkVIeW software to allow users to quickly set test instruments for the operation of charging and discharging tests on battery and super capacitor, etc. Users can define charging and discharging procedures to automatically execute procedures so as to obtain measurement results. History graphs are available and they can be exported to Excel for further analysis.

Feature

- Easily expand capacity.
 - O Long Term Power Monitoring of I, V, P(W)
 - O Create/define operation sequence for controlling Source/Load behavior.
 - O Simultaneously run test sequence of each channel and data logging
 - O Data Analyzer:
 - O VIeW chart: support Zoom In/Tracking of Samples
 - O VIeW table: summaries testing result for VIeW and also each step
 - including Voltage/Current/Power/VMax/Imax/PMax/AmpHour
 - O Live Data Monitoring:
 - O VIeW: Self-defined display range/offset adjustable
 - O Controllable displayed Grapf setting

Device Setting (Channel setting)

Edit channel: You can select used devices for each channels at 'Edit' button in the tool bar. You can also set from One channel up to Twelve channels.

* 'Channel' also can consist one Power supply or one Electronic Load.

Support Models:

DC Power supply : PSU series / PSW series / PSB series

DC Load : PEL-3000 series / PEL-3000E series / PEL-2000A series

Edit : Charging / Discharging procedure editing

- A) Support up to 100 patterns (sequence).
- B) Sequence steps: 1000 steps
- C) Minimum record period: 1s. Maximum step time: 100 Min.
- D) Maximum repeat cycles: 65535 cycles.

(1) Sleep : End Condition (time [s])

Sleep Charge

Discharge

- Error Detection Hi/Lo Voltage and current
 - (2) Charge : Setup the power supply Voltage, current, End Condition and Error Detection.
- (3) Discharge : Setup the parameters of electronic load Mode ; CC, CR, CP, CR, etc.
 Range ;
 Parameter;

End Conditions ; Discharge Time, Voltage and Current. X1 Error Detection ;Error will be detected when the over/under setting voltage or current is detected

%1: Priority is given to the contents to which end conditions are met first.

Test : Start/Stop

Click 'Start' button and examination will begin. Graph will be displayed on the second.

When you suspend all the examinations on the way, click 'Stop' button. All the examinations will stop irrespective of the situation of each channel.

Ch	Name	Pattern		Test	Time[S]	Repeat	Step	Mode	Parameter	Time[S]	Voltage[V]	Current[A]	Power[W]	Amp hr[Ah] (Sample)	Amp hr[Ah]	Chart

03	0315-1	:	~	-	-	-	-	-	-	-	-	-	-	-	-	

Name : Select Channel Name Pattern : Select Patarn Name Test : Select ON or OFF Chart : Select ON or OFF at Dispaly. Other condition are depend on pattern settings.

Analyzsis %3

The data acquired by the examination can be checked on an analysis screen. Click 'Analysis' button and an analysis screen will be displayed.

It is a folder of channel 1 (test1). The first test data is contained. The second test data is contained. It is a folder of channel 2 (test2).

Update

Click 'Updating' button after choosing the data, a graph and data will be displayed. A graph is classified by color for every data. * Since the graph of current is displayed in an absolute value, it becomes a plus direction irrespective of charge and discharge.

A data folder is created in a channel folder. One data folder will be created for every examination.

8 channel Charge / Discharge Test
